ClickFit Evo

TILED ROOF

Easy, watertight installation on Rosemary tiled roofs

Thanks to the clever click connection, you only need 4 base components for fast and easy installation.

Designed with simplicity and strength in mind

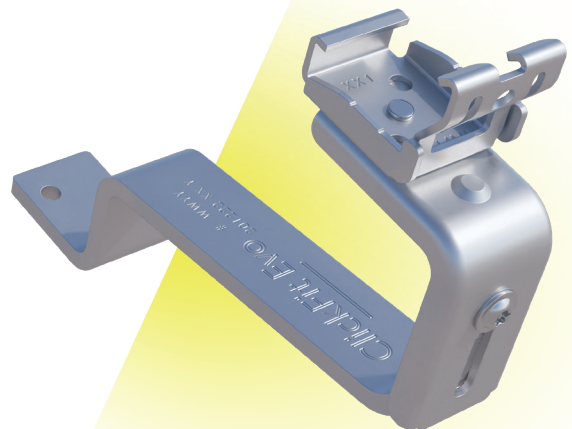

With just one tool, the strong preassembled hooks can be installed safely and quickly. By screwing the hook onto the rafters, the mounting system hovers above the tiles and does not exert pressure on them.

Flexible mounting and watertight roof integration

Thanks to the clever design of the rotatable click connection, solar panels can be installed in both landscape and portrait orientation. By applying flashings, the Rosemary hook provides a watertight solution.

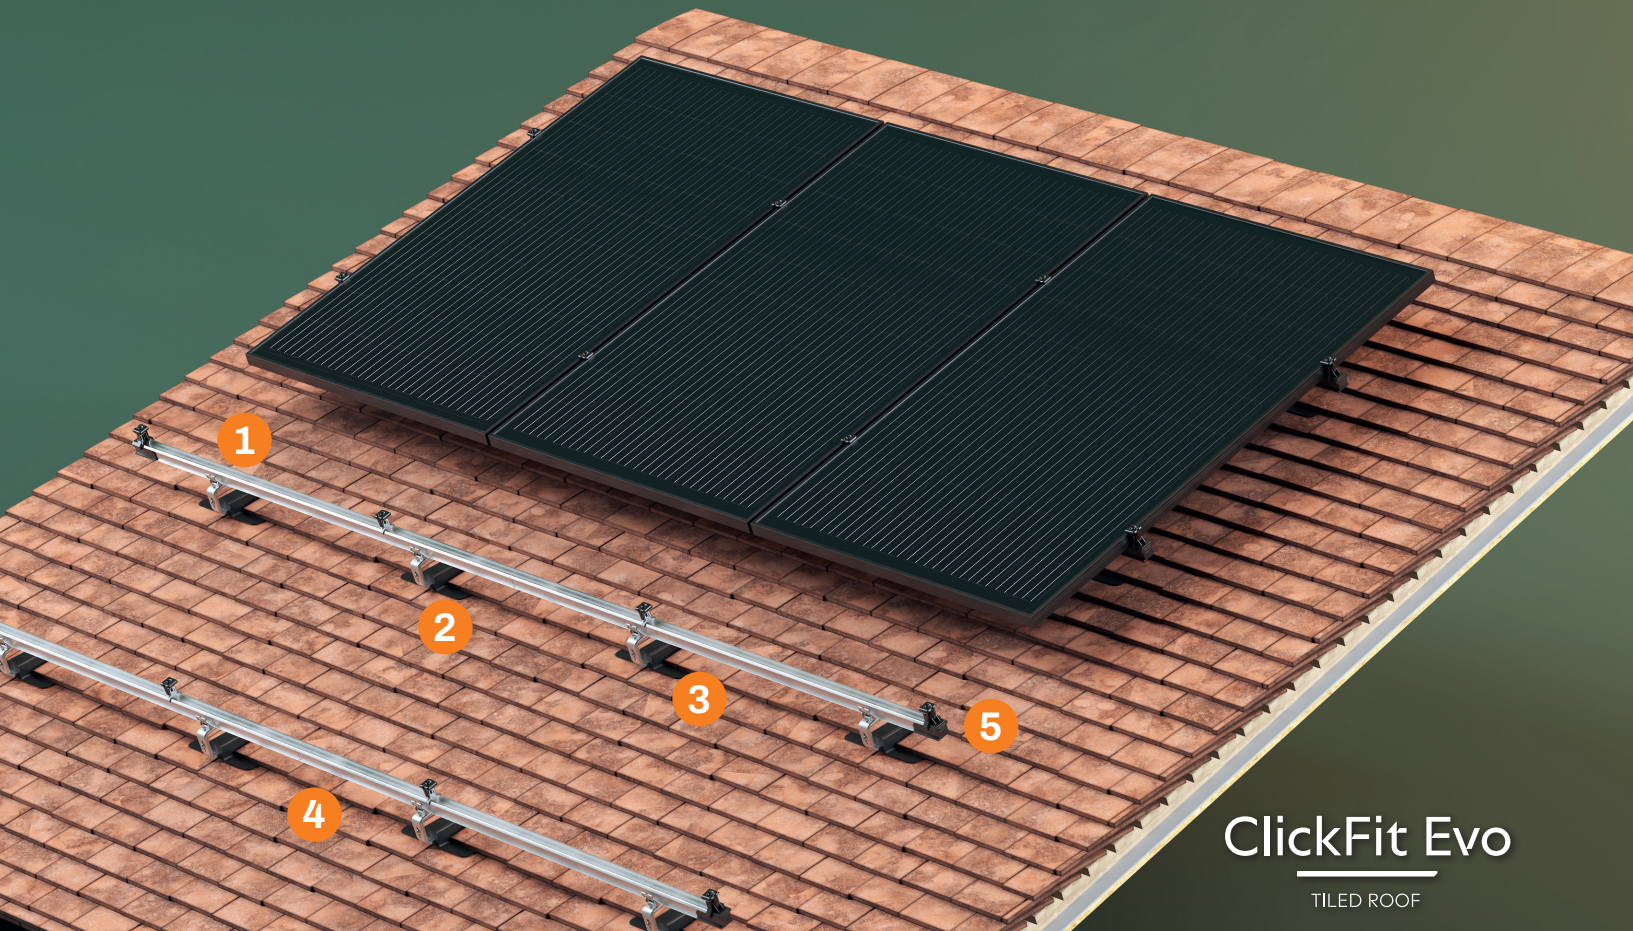

Why choose ClickFit Evo?

- ✓ Strong Magnelis® steel hook system
- ✓ Compatible with portrait and landscape mounting
- ✓ Easy installation with ClickFit Evo click connection
- ✓ MCS Certified

Rock-solid base for solar panels

ClickFit Evo

TILED ROOF

Patented click connection

The roof hook is pre-assembled with a self-aligning click connection. This allows for quick and easy installation of the mounting rail.

No pressure on roof tiles

The hook will be screwed on the rafters. This results in a strong mounting system which hovers above the tiles and minimizes the risk of breaking tiles.

Watertightness and neat roof integration

The Rosemary hook provides a neat and watertight solution in combination with flashings.

Universally adjustable

The roof hook is adjustable in height to easily align mounting rails.

Always the right measurements

The universal module clamp can be used both as mid clamp and end clamp, and is suitable for solar panels with a frame thickness from 30-50 mm.
